

CHAIN HANDCUFF SERIES

ASP Chain Handcuffs were designed in the field. Input came from officers and instructors in over 80 nations where ASP currently conducts training. As a result, this ASP design incorporates the practical features most requested by officers on the street. A stainless steel handcuff that weighs less than standard designs.

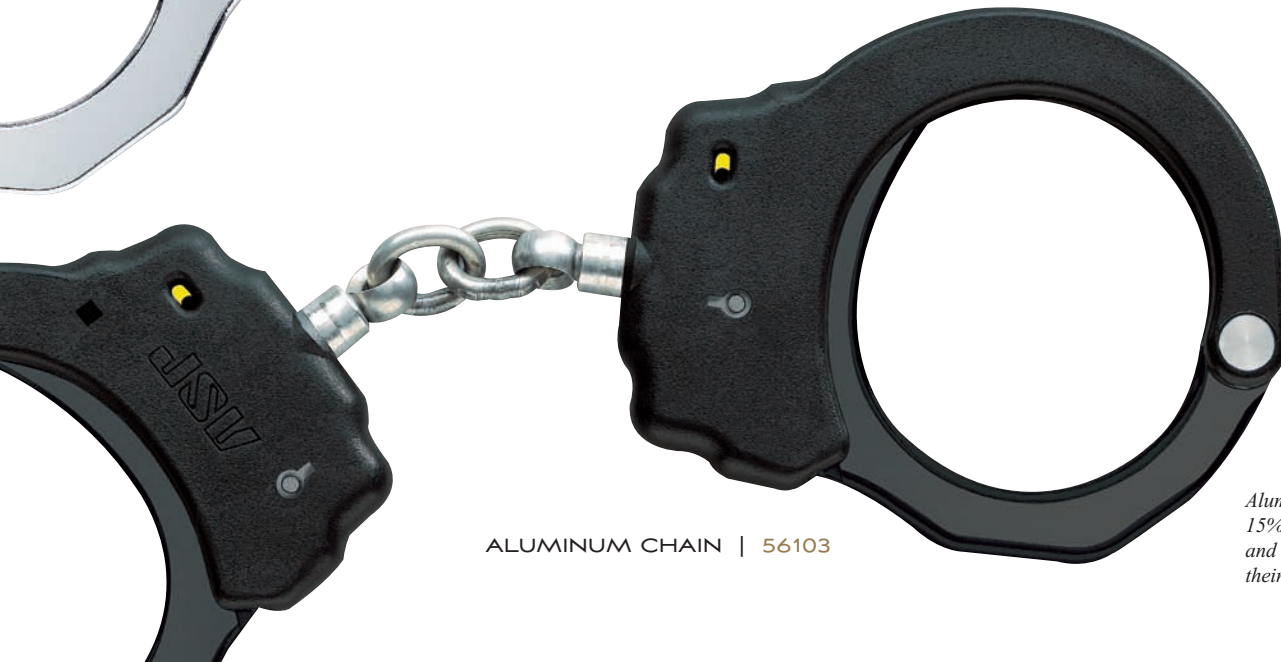

Chain cuffs are flexible and more easily applied during a confrontation. A flat contact bow improves application.

Complex “keyhole up” training procedures are no longer necessary. There is a keyway and double lock slot on each side of each restraint. A double lock warning bar is readily visible. Both double and single locks are released by turning the key in a single direction.

The frame geometry, deep set teeth and precision smooth action eliminate the need for backloading. Lock Assemblies are readily replaced.

STEEL CHAIN | 56101

ALUMINUM CHAIN | 56103

Aluminum handcuffs weigh 15% less than steel models and are distinguished by their black bows.
