

LINEAR MOBILITY, PERMANENT COLOR

The patented design of ASP Chain and Hinge Handcuffs provides the safest restraint in the industry. The flat contact surface and smooth action prevents injury during application. All edges of the frame, cheek plate and bow are rounded to minimize the potential for nerve damage. The conical geometry of the cuff securely holds both small and large wrists. Flex Frame Technology reduces injury potential from excessive lateral stress due to improper handcuff application. The double lock indicator is highly visible. It is easily checked to assure activation. Cuffs that test too tight may be loosened and double locked without removing the key from the cuff. The interchangeable Lock Set may be upgraded to a three pawl European or two pawl High Security. The two-sided lock release is recessed and easily accessed without trauma to the subject. Both the single and double lock are released by turning the key in one direction.

- A** Carbon Steel Bow
- B** Permanent Frame Color
- C** Stainless Steel Keyway
- D** High Visibility Double Lock Indicator
